

SPEED VAC

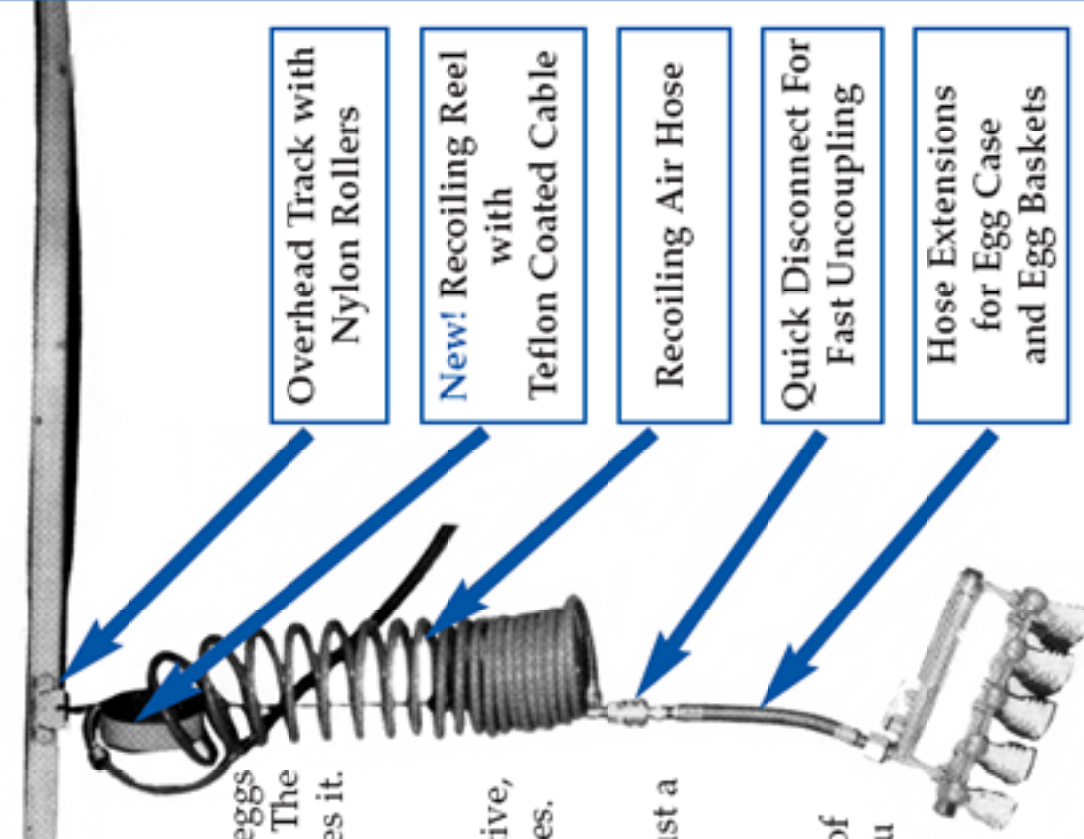

The Most Complete Line of Vacuum Egg Lift Systems Available

Fast—One operator will handle from 1,000 to 1,400 dozen eggs per hour depending on the type and size of case used. The lifter and spring do the work. The operator merely guides it.

Gentle—Breakage is reduced to zero. Vacuum Lift users report average savings of eggs per case. Special Rubber Lifter Cups have the right flexibility. This assures a positive, break proof grip on eggs of any size or combination of sizes.

Dependable—The lifters are foolproof in design and construction. Maintenance is practically zero—cleaning just a few minutes a day. The Vacuum pump, motor and tank system will give years of trouble-free service.

Economical—To figure your savings, multiply the value of two eggs per case by the number of cases a month you handle. Also, plants will be able to eliminate one or two workers depending on the operation. No modern, forward-looking operation can afford to be without an efficient, high-speed Vacuum Lift System

Overhead Track with Nylon Rollers

New! Recoiling Reel with Teflon Coated Cable
